How to use Bitbucket Pipelines for CI/CD

Bitbucket

Bitbucket Pipelines is an integrated **CI/CD service** that allows you to automatically build, test, and deploy your code from your Bitbucket repository.

CLOUDSPIKES

Multi-cloud solutions

Step 1: Create or choose a repository, and pick a project.

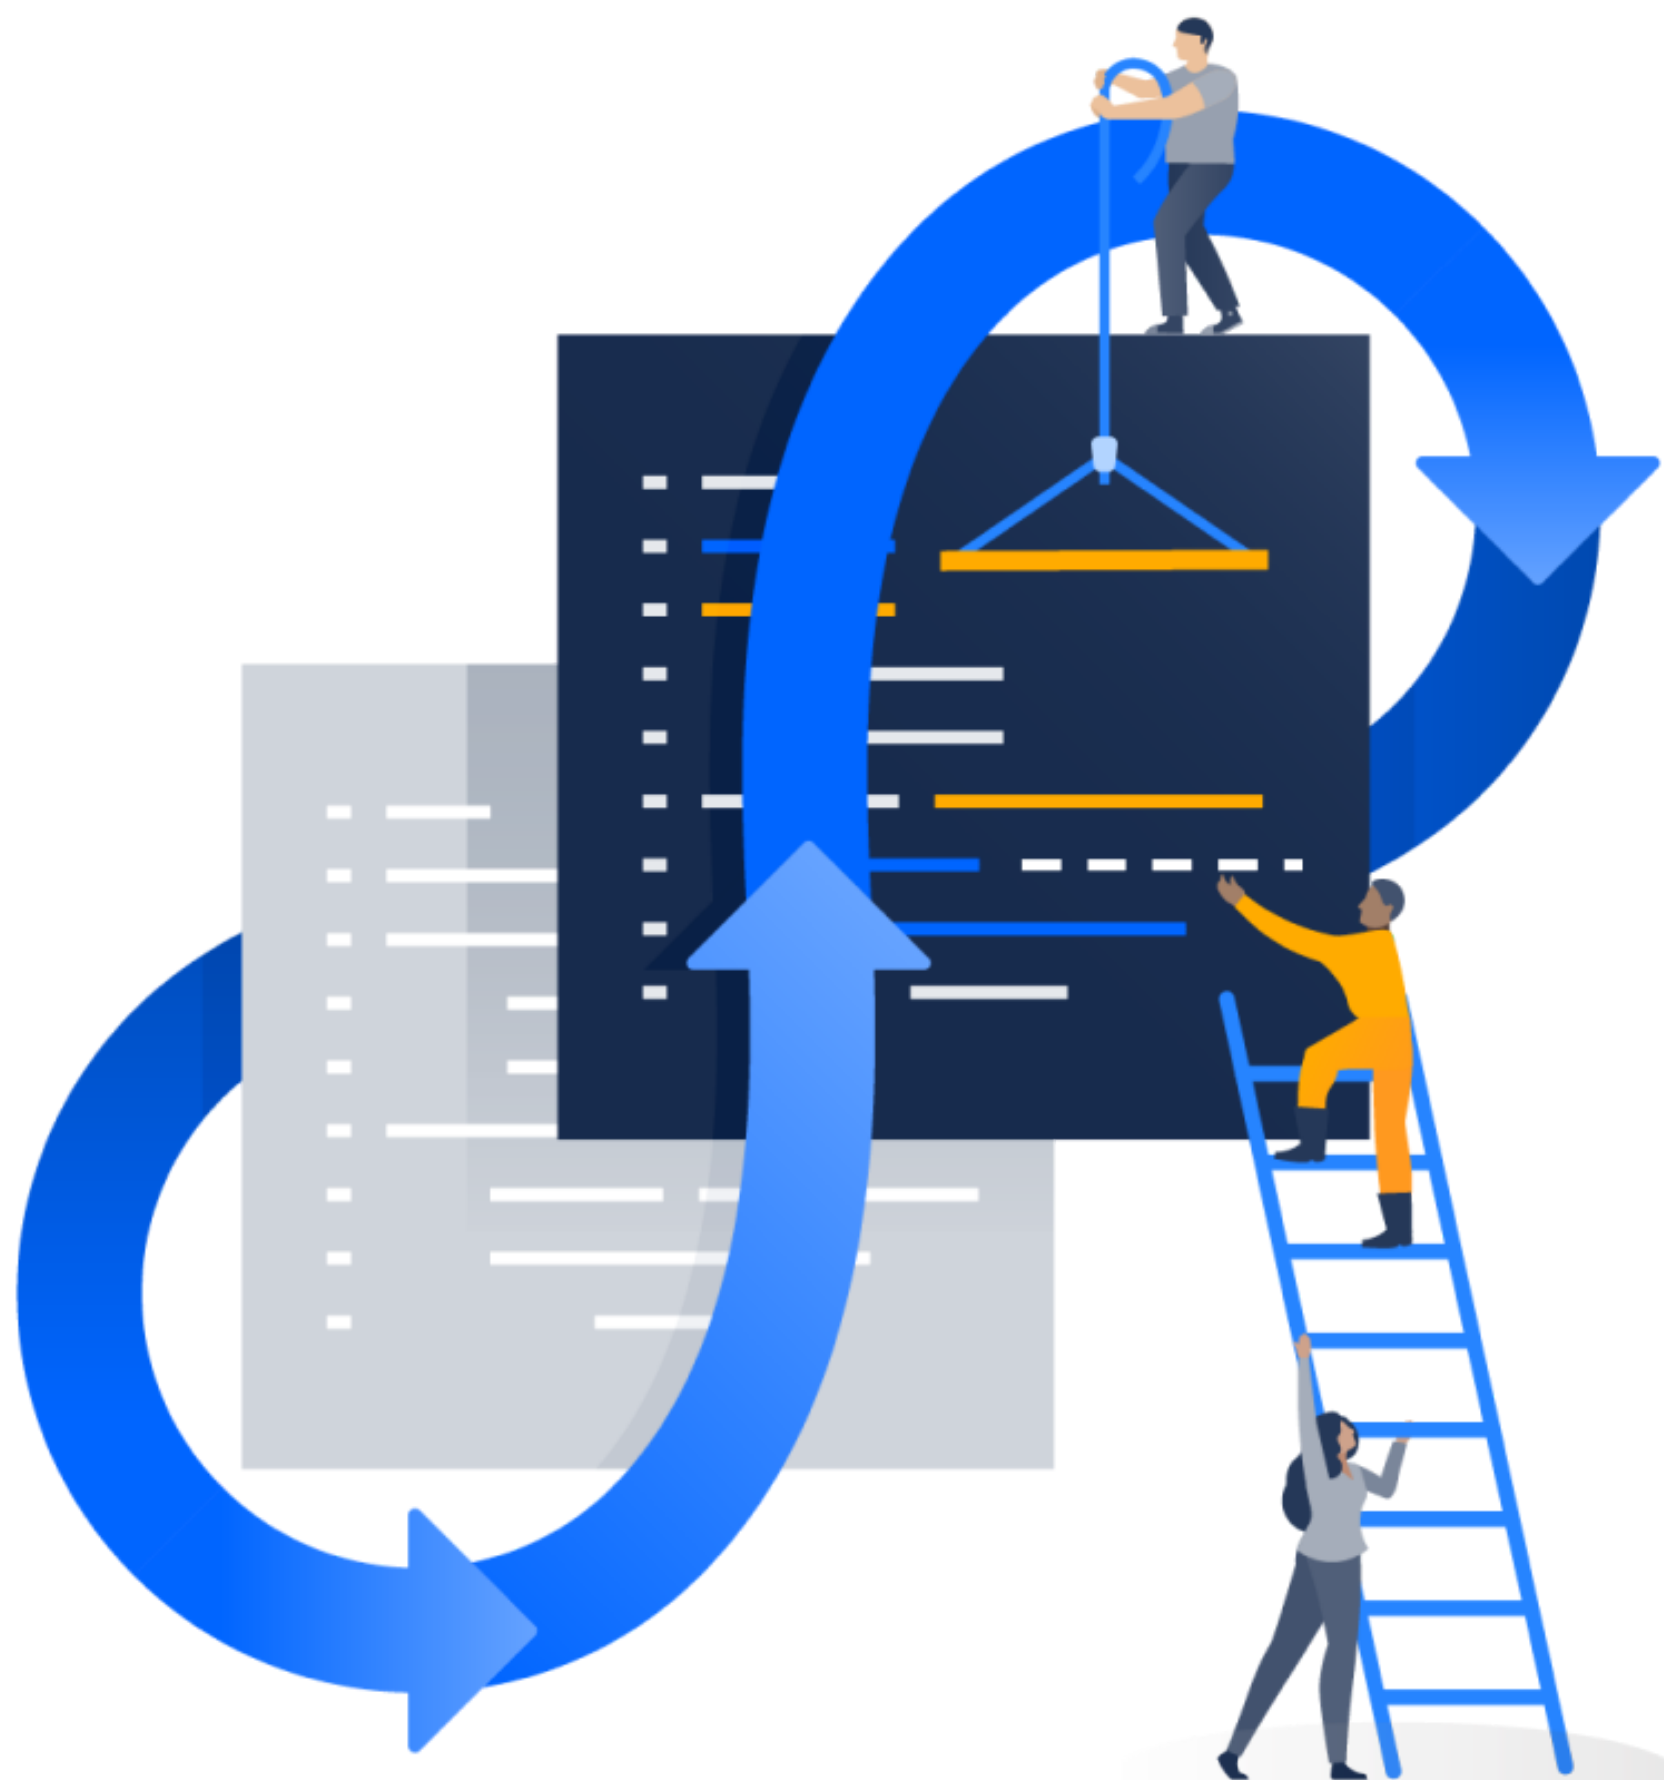

CLOUDSPIKES

Multi-cloud solutions

Step 2: Define your pipeline steps and triggers.

CLOUDSPIKES

Multi-cloud solutions

Step 3: Run your pipeline and monitor the results.

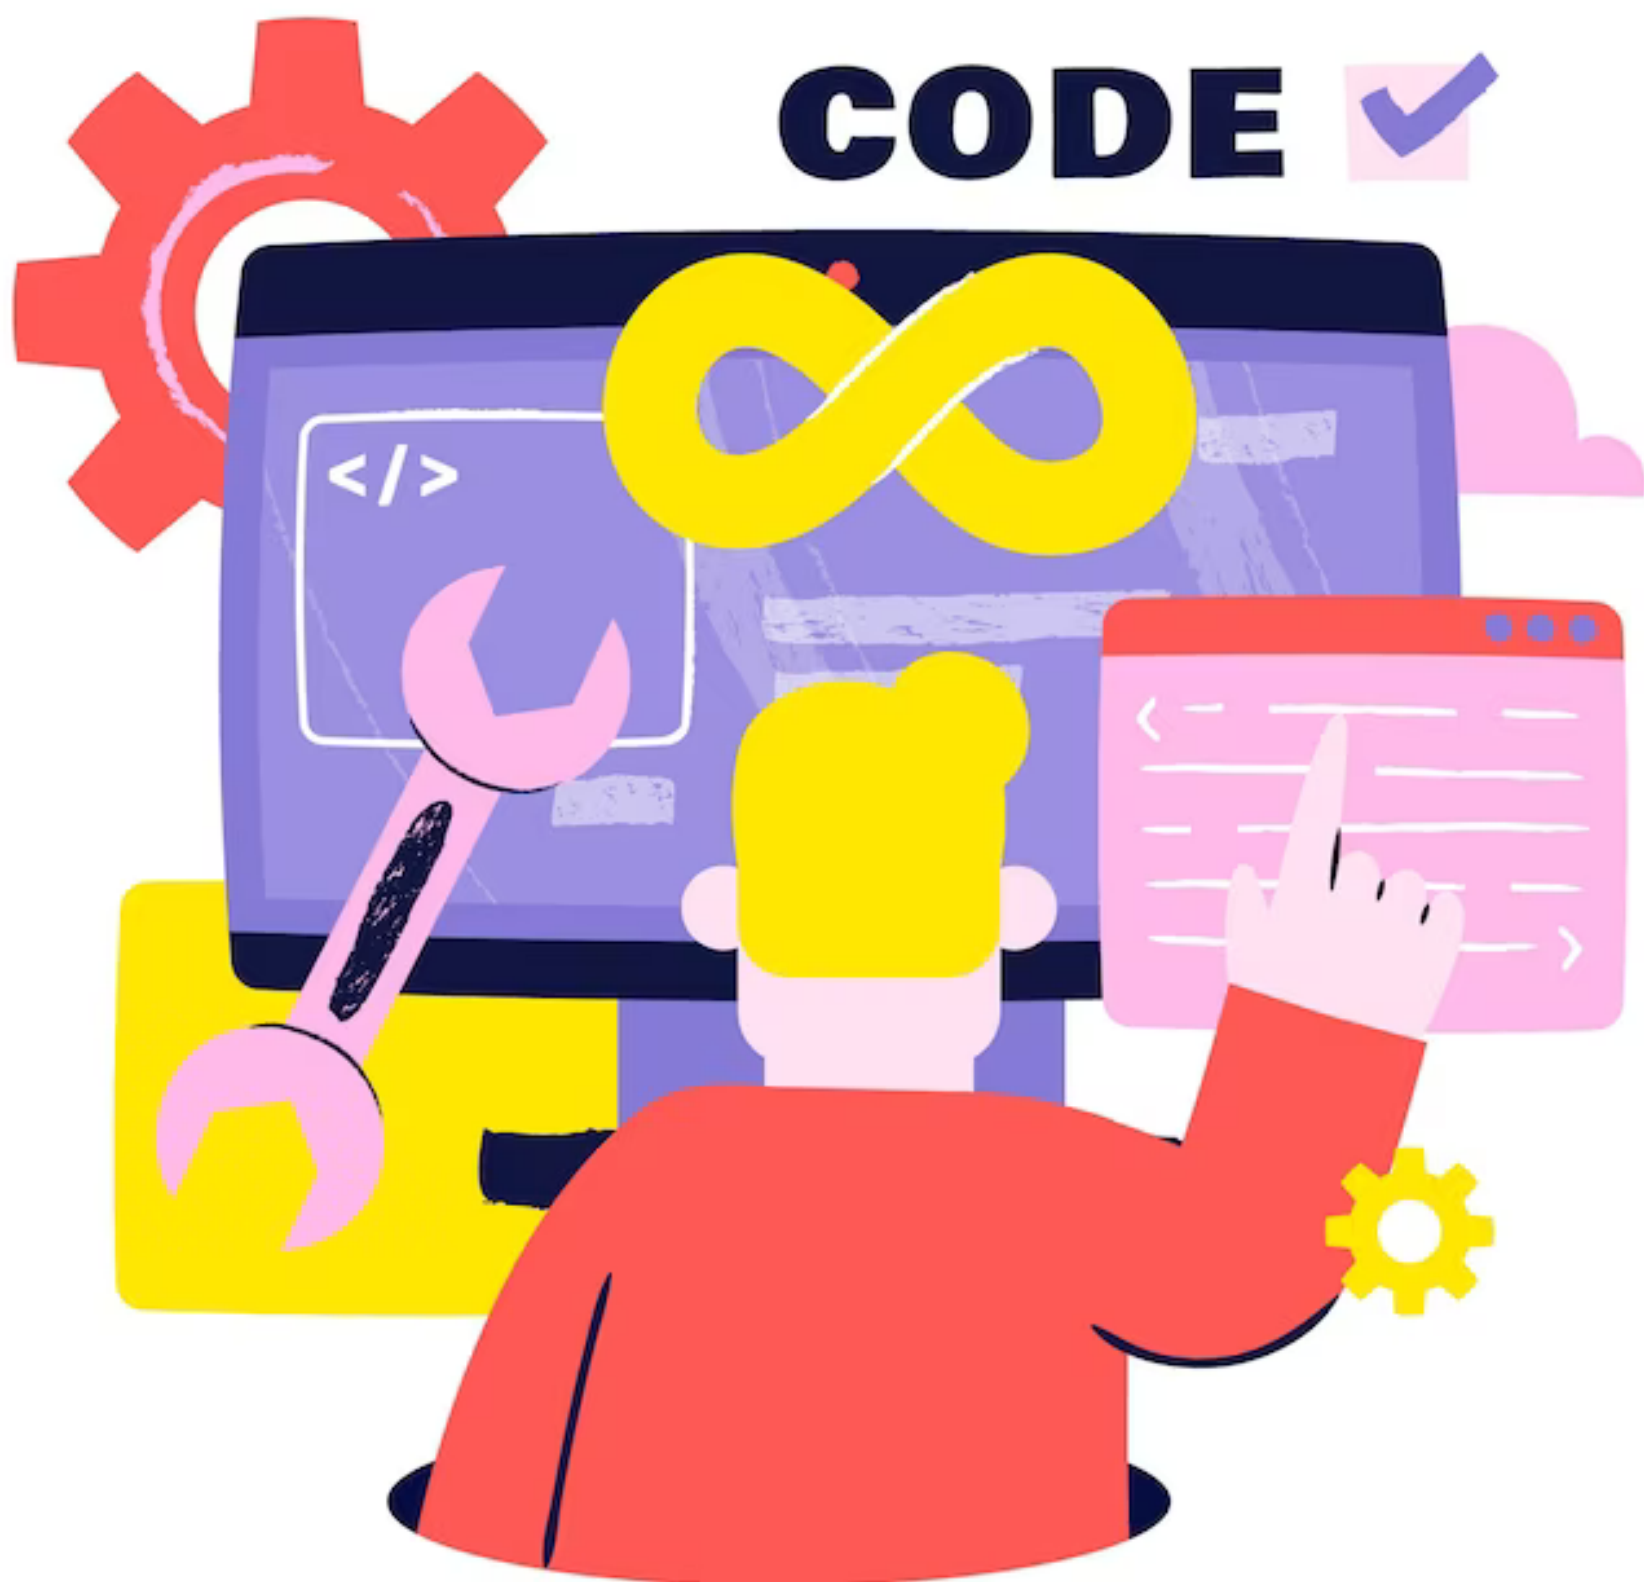

CLOUDSPIKES

Multi-cloud solutions

Step 4: Deploy your code to AWS.

That's it! You have successfully created a **CI/CD pipeline** with Bitbucket Pipelines.
